Education

Indian Institute of Technology (ISM)

May 2026

Bachelor of Technology in Electronics and Communication Engineering

Dhanbad, Jharkhand

- CGPA: 8.21 / 10.00 | **Relevant Coursework:** Digital Image Processing, Signals and Systems, C/C++, Machine Learning

Experience

Samsung Research Institute

May 2025 – July 2025

Developer Intern, Unified System Management Team

Bangalore, India

- Built **YANG** data models to standardize device-workflow configuration on the USM portal, reducing configuration setup time by **20%** across supported device types.
- Designed and shipped a **RAG**-based log-querying service backed by **Docker**-containerized microservices, cutting manual issue-resolution time by **25%** and enabling automated log parsing.
- Collaborated with cross-functional teams to integrate the log-querying service into the existing USM portal workflow, ensuring backward compatibility with legacy device configurations.

Projects

PrepGenie – AI Interview Agent | Python, FastAPI, C++, React.js, LLM Agents

[Link](#)

- Architected a mock-interview system orchestrating **multiple asynchronous agents** to generate resume-tailored questions, keeping end-to-end evaluation latency under **1.5s**.
- Built a high-performance resume parser in **C++** to parse candidate PDFs in **<200ms**, personalizing interview flow and difficulty based on extracted technical skills.

Connecting the Dots | FastAPI, React.js, Neo4j, LangChain, Docker

[Link](#)

- Built a multithreaded, async **FastAPI** document-extraction pipeline with OCR, boosting extraction throughput by **2x** and achieving **85%** text-retrieval accuracy on unstructured PDFs.
- Modeled document relationships in a **Neo4j** knowledge graph handling **5,000+** entities, cutting complex multi-hop query latency by **40%**; deployed via **Docker** with a React UI.

Video Chat Assistant | Flask, LangGraph, Ollama, VLMs

[Link](#)

- Built a **Flask** service using **SmolVLM2** for scene-level video summarization, processing keyframes at **30 FPS** with streaming **LangGraph** conversational response generation.
- Benchmarked inference on **NVIDIA A100** GPUs via SSH, optimizing batch sizes to reduce VRAM memory usage by **25%** and eliminate processing bottlenecks.

Technical Skills

Languages: C, C++, Python, SQL, JavaScript, HTML/CSS

Backend & Infra: FastAPI, Flask, REST APIs, Docker, Linux, Git

Data & ML Tooling: Neo4j, LangChain, LangGraph, Ollama

Core CS Concepts: OOP, Computer Networks, DBMS, Operating Systems

Certifications

- Deep Learning Specialization – DeepLearning.AI (Andrew Ng), Coursera
- Google Bits & Bytes of Computer Networking – Google, Coursera
- Oracle Cloud Infrastructure Foundations Associate – Oracle
- WorldQuant Challenge – Gold Certification – WorldQuant Brain

Achievements & Leadership

Competitive Programming: Solved 1000+ data structure and algorithm problems; rated Codeforces Specialist and CodeChef 3-Star.

Veuncode Hackathon Finalist: Top team out of **150+** for scalable backend infrastructure.

IIT ISM Aplathon (WorldQuant Brain): Ranked **37th of 1000+** participants.

Leadership: Social Media Head, LiveTalksISM, IIT Dhanbad – directed digital strategy and content planning.
